

Specification ? Flowgate

1. Summary

Flowgate is a compliance workflow tool for regulated fintechs. We are replacing a marketing site built in 2019 that nobody on the team can edit.

2. Audience

Heads of compliance at Series B to Series D fintechs in the EU and the UK, plus the engineers who will read our documentation before their manager signs anything.

3. Pages required

- Home
- Product, split into three capability pages
- Pricing, with three named tiers
- Customer stories, one page per customer
- Documentation, versioned, with a left-hand navigation
- Careers, fed from our applicant tracking system
- Legal: terms, privacy, sub-processors

4. Content we already have

Eleven customer stories in Google Docs, forty documentation pages in Markdown, and a pricing table that changes roughly twice a year.

5. Constraints

- English only. We do not translate, and a half-translated site is worse than an English one.
- No blog. Marketing tried a blog twice and abandoned it twice.
- No third-party analytics that sets cookies without consent.
- The documentation must remain in Markdown in our own repository.

6. Tone

Precise, technical, unhurried. Our buyers are sceptical of superlatives and our engineers are the ones who forward the link.
